

# NETWORK PENETRATION TEST REPORT

## Home Network Security Assessment

Prepared by: Ekene Henry Uwaezuoke

Role: SOC Analyst & Penetration Tester

Date: 2026-06-25

Classification: CONFIDENTIAL

### 1. Executive Summary

A comprehensive network penetration test was conducted on a home network to identify security vulnerabilities, open services, and potential attack vectors. The assessment covered host discovery, service enumeration, OS detection, and vulnerability scanning using industry-standard tools. All sensitive information including IP addresses and device names have been redacted to protect privacy.

### 2. Scope & Methodology

| Item                | Details                   |
|---------------------|---------------------------|
| Target Network      | 192.168.X.X/24 [REDACTED] |
| Total Hosts Scanned | 256 IP addresses          |
| Live Hosts Found    | 8 hosts                   |
| Tools Used          | Nmap 7.94SVN              |
| Test Date           | 2026-06-25                |
| Tester              | Ekene Henry Uwaezuoke     |

### 3. Hosts Discovered

| Host ID | IP Address | Device Type    | Status |
|---------|------------|----------------|--------|
| Host-01 | [REDACTED] | Network Router | UP     |
| Host-02 | [REDACTED] | Unknown Device | UP     |

|         |            |                    |    |
|---------|------------|--------------------|----|
| Host-03 | [REDACTED] | LG Smart TV        | UP |
| Host-04 | [REDACTED] | Android Phone      | UP |
| Host-05 | [REDACTED] | Android Phone      | UP |
| Host-06 | [REDACTED] | Android Phone      | UP |
| Host-07 | [REDACTED] | Kali Linux Machine | UP |
| Host-08 | [REDACTED] | Android Phone      | UP |

## 4. Key Findings

| #    | Finding                         | Severity | CVSS | MITRE ATT&CK |
|------|---------------------------------|----------|------|--------------|
| F-01 | Router HTTP Admin Panel Exposed | HIGH     | 7.5  | T1078        |
| F-02 | Unencrypted HTTP on Port 80     | MEDIUM   | 5.3  | T1557        |
| F-03 | Apache 2.4.68 Running on Host   | MEDIUM   | 5.0  | T1190        |
| F-04 | Multiple Unidentified Devices   | LOW      | 3.1  | T1018        |
| F-05 | Filtered Ports on Mobile Device | INFO     | 2.0  | T1049        |

## 5. Detailed Findings

### ***F-01: Router HTTP Admin Panel Exposed***

**Description:** The network router exposes an HTTP admin panel on port 80 accessible to all devices on the network.

**CVSS Score:** 7.5 (HIGH)

**MITRE ATT&CK;:** T1078 - Valid Accounts / T1110 - Brute Force

**Risk:** An attacker on the network can brute force the admin credentials and gain full control of the router.

**Remediation:** Disable HTTP access. Enable HTTPS only. Change default credentials. Enable account lockout.

### ***F-02: Unencrypted HTTP on Port 80***

**Description:** Router serves traffic over unencrypted HTTP allowing potential interception.

**CVSS Score:** 5.3 (MEDIUM)

**MITRE ATT&CK;:** T1557 - Man in the Middle

**Risk:** Credentials transmitted over HTTP can be intercepted by an attacker using ARP spoofing.

**Remediation:** Force HTTPS redirect. Disable plain HTTP port 80.

### ***F-03: Apache 2.4.68 Web Server Detected***

**Description:** Apache HTTP Server 2.4.68 running on internal host with both HTTP and HTTPS enabled.

**CVSS Score:** 5.0 (MEDIUM)

**MITRE ATT&CK::** T1190 - Exploit Public Facing Application

**Risk:** Web server exposed internally could be exploited if misconfigured.

**Remediation:** Ensure Apache is configured securely. Disable directory listing. Keep updated.

## 6. Conclusion

The network assessment revealed no critical vulnerabilities however two high and medium risk findings were identified primarily around the router admin panel exposure and unencrypted HTTP traffic. Immediate remediation is recommended for F-01 and F-02. All findings have been documented with CVSS scores and MITRE ATT&CK; mappings to assist with prioritization and remediation planning.
